

Company introduction

Dongguan Hanjun Plastic Product Co.,Ltd is a global company supplying many industries with power transmission and conveying components. The product offering ranges from roller chains, couplings and geared products to conveyor chains, belts and components. The **Hanjun FlatTop** division is manufacturing conveyor chains, belts and components.

Hanjun chains and belts are being used to convey a wide variety of products: bottles, cans, boxes, crates, tires, loose food, glass jars, PET containers, trays; shortly every transport in production halls in virtually any industry.

■ As the handling specialist in the field of conveying, the **Hanjun** product portfolio is providing solutions for complete lines in several industries in order to improve productivity.

■ In beverage industry palletizers, depalletizers, washers, labelers, fillers, pasteurizers, inliners, outfeeds, elevators and accumulation tables are equipped with slatband chains, curves, sprockets, belts, bearings, leveling elements and many more conveyor components.

■ For the container manufacturing industry special products and materials are available, such as abrasion resistant polyamide for glass plants, vacuum chains for can making and gripper chains for vertical transport.

■ A wide range of products is also offered for blanchers, cookers, washers, coolers and processing lines in fruit, vegetables, bakery, confectionary etc. And many more products are available for the handling of packed food.

■ In automotive industry the products are engineered to meet the most demanding applications, such as rubber processing and tire handling.

■ This is just a short selection of the applications in which **Hanjun** products are being used. Among others they have also found their way into pharmaceutical production lines, battery manufacture, paper and cardboard production.

Dongguan Hanjun Plastic Product Co.,Ltd

The product line can be split up into:

- Chain guide componets
- Product handing components
- Frame support components
- Supporting and leveling elements
- Self-aligning bearings
- Miscellaneous components Line control

Stainless Steel System Support Component

The transmission device support component is composed of a stainless steel tube, a connecting plate connecting the beam body and a beam support frame.

Two-point or three-point reinforced nylon brackets with connectors can be provided for the transmission device support of all system widths. The bracket device has threaded bushes and non-slip joint feet with adjustable height. In addition to increasing friction, it can also reduce vibration. First select the appropriate joint foot length to achieve height adjustment of 30-100.
